

Prescription Diet® j/d® Feline Mobility

Hill's® Prescription Diet® j/d® Feline is the first clinically proven therapeutic food for cats with arthritis available in the U.S. It is clinically proven to help cats be more active in 28 days. Hill's® Prescription Diet® j/d® is nutrition that goes beyond the pain by targeting the cause of arthritis and works to reduce inflammation. Catching arthritis early and starting a treatment plan including Hill's® Prescription Diet® j/d® Feline can prevent the need for more aggressive treatments later.

WHERE TO BUY ▶

Key Benefits

Indications

Arthritis (osteoarthritis).

Signs:

Decreased activity

Trouble jumping on/off surfaces

Eliminating outside the litter box

Walks stiffly and may even limp

Social reclusiveness

Not Recommended For:

Growing kittens, pregnant or nursing cats.

Evidence-Based Clinical Nutrition

- Hill's® Prescription Diet® j/d® Feline Mobility is clinically proven to help cats be more active in 28 days. ¹
- Contains omega-3 fatty acids, which helps interrupt the degradation of cartilage. ²

These characteristics make **Prescription Diet® j/d® Feline** veterinary exclusive pet food useful as a nutritional aid for cats with arthritis:

Omega-3 fatty acids	High	Fatty acids help to preserve cartilage.
Carnitine	High	Helps cats burn fat while maintaining lean muscle mass.
Target Urinary pH 6.3 - 6.5*		Promotes normal acid urine to support urinary tract health.

Additional Info

- Controlled phosphorus and high levels of omega-3 fatty acids help maintain kidney health.
- High carnitine helps burn fat while maintaining lean muscle mass.

Other Products to Consider

- For obese cats with arthritis, feed **Prescription Diet® r/d® Feline** until ideal weight is achieved, then begin feeding **j/d® Feline**.

References

*Urine pH of individual cats may vary due to complicating factors such as time of feeding before urine collection, type of urine collection, individual animal variation, or test methodology.

Feeding Guide

Daily Feeding Guide:

Helpful Tips

- **These amounts are a starting point only. Your cat may need less or more food to maintain proper weight. Adjust as needed. If you are unsure, ask your veterinarian.**
- With your veterinarian's approval, mix increasing amounts of your cat's new food with decreasing amounts of the old food over a 7-day period. Prescription Diet® formulas are available in a wide variety of dry foods and treats for your cat's unique needs, and canned foods with delicious flavors your cat will love. Supplementation with other foods or treats is unnecessary and may decrease the effectiveness of the food. When using with canned food and treats, decrease the amount of canned food to avoid overfeeding.
- **Keep fresh water available at all times!**
- For best results, have your veterinarian monitor your cat's condition.
- **To prevent suffocation, keep this plastic bag out of the reach of pets and children.**

Adult maintenance

Weight of Cat	Amount per Day
6 lb (2,7 kg)	1/3 cup (40 g) - 3/8 cup (45 g)
10 lb (4,5 kg)	3/8 cup (45 g) - 5/8 cup (80 g)
14 lb (6,4 kg)	1/2 cup (65 g) - 3/4 cup (95 g)
18 lb (8,2 kg)	2/3 cup (85 g) - 7/8 cup (110 g)

Average Nutrient And Caloric Contents

Dry 4043 kcal/kg (506 kcal/per cup²)
